

JUNSEN LI

Objective: Quantitative Research / Risk & Data Analytics (Internship)

+86 189-7606-5269 | 251275042@smail.nju.edu.cn | WeChat: junsenli18976065269

Nanjing University · School of Engineering Management · CS-Finance Experimental Class (Sophomore)

GitHub: github.com/jason218-ljs

EDUCATION

Nanjing University — School of Engineering Management, CS & Finance Experimental Class

Sep 2025 – Jun 2029 (exp.)

- GPA **4.28 / 5.0**; CET-4: 579 (CET-6 scheduled Dec 2026)
- Core courses: Corporate Finance, Financial Economics, Money & Banking, Probability & Statistics, Python Data Mining

INTERNSHIP EXPERIENCE

Transwarp Technology — R&D Center / AI Product Department, Quantitative Researcher

Intern · Jul – Aug 2026

AI-native portfolio investment program · Member of a 5-person Investment Committee with risk veto; owned factor scoring, portfolio construction, backtest validation, and risk checks

- **Led development of AlphaForge**, a multi-factor stock-screening and backtesting system: 100-point three-layer scoring framework (fundamental / technical / money-flow) with adaptive thresholds across 21 sub-industries, two-stage “pattern pre-filter + quality scoring” selection, 214 automated tests, and a web dashboard
- **Built an event-driven backtesting engine** modeling A-share frictions (T+1, price limits, stamp duty, slippage) and Kelly-criterion position sizing with per-stock and per-industry constraints; multi-factor strategies achieved positive excess returns on real A-share data
- **Led design of a three-flywheel self-evolution system** (engineering / data / cognition): zero-intrusion sidecar for health checks, data-quality detection, and methodology reviews; 62 unit tests, CI, and AST-based static rule checks
- **Contributed to Buffett-Value-Agent**, a value-investing AI agent: rule-based financial computation and risk-validation modules under a Human-AI Boundary Protocol (HABP)

RESEARCH EXPERIENCE

“Method and System for Trustworthy Uncertainty Constraint of AI Agents” — Invention Patent

3rd Inventor · Filed 2026

- Trustworthy-control technology for LLM-based agents, constraining behavioral, semantic, and provenance uncertainty in multi-step execution

Yuxiu College “Young Scientist Growth Camp” — Early Research Training: Social-Media Investor Sentiment

Mar – Jun 2026

- Comparative study of investor sentiment and market attention across StockTwits / X / Seeking Alpha, using LLM-assisted annotation and Python data processing
- **Lead crawler developer (team assignment)**: built Xueqiu crawlers with Requests and browser automation, collecting user-follow and posting data in three batches; dedup, cleaning, and data-quality documentation under anti-scraping constraints
- Annotated A-share stock-forum posts for investment sentiment (bullish / bearish / neutral), distilling the annotation manual into a quick-reference guide

PROJECTS

China Undergraduate Mathematical Contest in Modeling (CUMCM) — Programmer

2026 – Present

- Built a heliostat-field optical-efficiency simulator: cosine, shadowing, atmospheric-transmission, and truncation models, with KD-tree neighbor search and NumPy vectorization for full-field simulation

“AI + Engineering Management” Course Project: Data Analytics Assistant — Core Developer

Sep 2026 – Present

- 7-member team project (in progress) on social-insurance & tax compliance analytics; own technical design and the data-processing / rule-engine modules

OTHER EXPERIENCE

Nanjing University Wartime-Relocation AI Documentary (off-campus) — AI Video Production & Editing

Dec 2025 – Jun 2026

- Used Seedance 2.0 to produce ~330 AI-generated videos tracing the Nanjing–Wuhan–Yichang–Chongqing–Chengdu relocation route — prompt engineering, generation, and CapCut post-production; authored 4 technical documents

SKILLS

- **Quant methods**: multi-factor scoring & screening, event-driven backtesting, Kelly sizing, risk & attribution
- **Programming**: Python (pandas / NumPy / matplotlib), pytest, Git; ML fundamentals (coursework)
- **Data acquisition**: web crawling (Requests, XPath / CSS selectors, browser automation, anti-scraping)
- **Web**: Django, WeChat Mini Programs (cloud development) — learning practice; Office & Markdown
- **Languages**: Mandarin (native), English (CET-4 579; CET-6 Dec 2026)
